

## SLims gives to Diagnostic Laboratories the ability to fully control their workflows and routines

Key LIMS + ELN features of SLims: The easy way to manage your Diagnostic Lab

### SLims for Diagnostic Labs Highlights

- Comprehensive solution offering all required functionalities for a Diagnostic Lab, removing the need for a patchwork of different applications
- A true, 100% chain-of-custody from sample shipment and registration, wet bench routines, machines runs, in-silico analysis, result validation and report generation
- Customer portal functionality included with the SLims order module
- Completely browser-based solution, exposed over https for security towards your customers
- You define the performance indicators that fit your lab settings and they can be set to give laboratory managers a real-time insight into their actual lab performance
- Easily customize reports, using your own templates, to provide your customers the results exactly as they expect to see them, without having to purchase an additional piece software

The LIMS + ELN features of SLims make it the right platform providing a solution to these needs. It provides a true, 100% closed, chain-of-custody covering the sample from shipment to report delivery.

### Why use SLims for Diagnostics ?

The complete LIMS + ELN features of SLims support Diagnostic Labs to easily deliver best-in-class results

When our SLims engineers looked into the challenges encountered by Diagnostic labs that try to streamline and digitize their day-to-day operations, they found many similarities across a variety of Diagnostic laboratory settings.

From a customer perspective, access to an online and secured portal for sample submission, test selection, follow-up of the sample testing process, and easy online result retrieval is expected. From a lab perspective, operators and management alike need to have a single, unified system for tracking incoming samples, their registration, wet bench protocol, traceability across machine runs, in-silico analysis routines, result validation and report generation.

### About Genohm

Genohm is a Swiss company with offices in Lausanne (Switzerland), Ghent (Belgium) and in Durham, NC (USA). The company has developed SLims, a laboratory software automation suite. SLims provides laboratories with one integrated LIMS + ELN environment that tracks data and samples from the original sample shipment down to the result from lab machines and in-silico analysis pipelines. It fully accommodates the needs of any research lab, NGS lab, service facility, Biobank or QC lab.
